
PUSHING BOUNDARIES

Terumo Interventional Systems is **committed to your success** with innovative procedural solutions and ongoing support for your most challenging cases.

We are relentlessly seeking new ways to help you apply effective solutions and achieve **better outcomes for more patients.**

TERUMO INTERVENTIONAL SYSTEMS

Angio-Seal®

Vascular Closure Device

ORDERING INFORMATION

ANGIO-SEAL VIP

PRODUCT CODE	FRENCH SIZE	GUIDEWIRE DIAMETER (in)
610130	6	0.035
610131	8	0.038

Contents: Vascular Closure Device, Insertion Sheath, Arteriotomy Locator and 70 cm Guidewire with "J" Straightener (10 units per box).

FIND OUT MORE Phone: 800.888.3786 terumois.com

Indications
The Angio-Seal Vascular Closure Device is indicated for use in closing and reducing time to hemostasis of the femoral arterial puncture site in patients who have undergone diagnostic angiography procedures or interventional procedures using an 8 French or smaller procedural sheath for the 8 F Angio-Seal device and a 6 French or smaller procedural sheath for the 6 F Angio-Seal device. Angio-Seal is also indicated for use to allow patients who have undergone diagnostic angiography to safely ambulate as soon as possible after sheath removal and device placement, as well as to allow patients who have undergone an interventional procedure to safely ambulate after sheath removal and device placement.

Important Safety Information
Possible adverse events for vascular closure devices include, but are not limited to: bleeding or hematoma, AV fistula or pseudoaneurysm, infection, allergic reaction, foreign body reaction, inflammation or edema. This device should only be used by a licensed physician (or other health care professional authorized by or under the direction of such physician) possessing adequate instruction in the use of the device, e.g., participation in an Angio-Seal physician instruction program or equivalent.

RX ONLY. This advertisement is directed to physicians only, and not to consumers. Refer to the product labels and package insert for complete warnings, precautions, potential complications, and instructions for use.

TERUMO INTERVENTIONAL SYSTEMS

Angio-Seal®

Vascular Closure Device

THE INSIDE ADVANTAGE™

Bioabsorbable + Dual Security

TERUMO INTERVENTIONAL SYSTEMS

Angio-Seal®
Vascular Closure Device

HELP ENSURE **SUCCESSFUL HEMOSTASIS**

The ANGIO-SEAL active closure anchor gives you the inside advantage. The anchor creates a mechanical seal from the inside out—here's how:

- **The anchor supports proper location for a reliable seal and collagen positioning[1,2]:**

  99.7% deployment success[3]

  97.8% hemostasis by device[3]

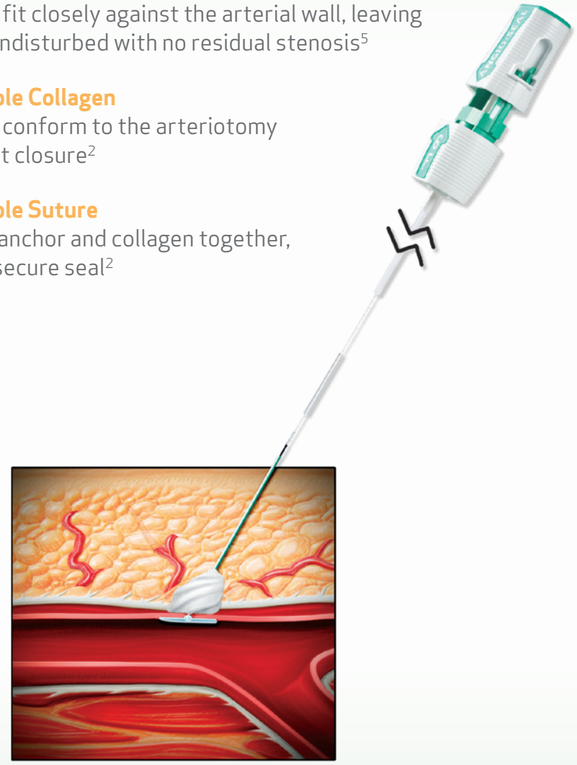
- **The anchor and seal are bioabsorbed:**
  - Fibrin coats the anchor within hours and becomes totally encapsulated in 7-14 days[4]
  - Anchor begins to hydrate and soften 24-36 hours after deployment[4]
  - Anchor is absorbed 95% at 42 days[5]
  - All components are absorbed within 60-90 days[1, 2, 6, 7]
- Arterial flow is not compromised, no evidence of chronic scar tissue or inflammation[5,6]

ANGIO-SEAL® VIP

RELY ON **DUAL SECURITY**

The bioabsorbable ANGIO-SEAL anchor + collagen provides dual security, ensuring it is positioned correctly and stays in place[1,2]

- **Bioabsorbable Anchor**
  Designed to fit closely against the arterial wall, leaving blood flow undisturbed with no residual stenosis[5]
- **Bioabsorbable Collagen**
  Designed to conform to the arteriotomy for confident closure[2]
- **Bioabsorbable Suture**
  Tethers the anchor and collagen together, providing a secure seal[2]



PERFORM RESTICK WITH CONFIDENCE

Clinical data supports the safety of restick following an initial ANGIO-SEAL deployment[7]

- Restick can be performed without device dislodgement or any significant vascular complications
- Arterial closure can be achieved with a second ANGIO-SEAL Vascular Closure Device

Vascular Complications Following Restick

COMPLICATIONS		PROPORTION	95% CONFIDENCE INTERVAL
Large Hematoma (≥ 10cm)	3	0.0166	0.0043 – 0.0515
Vessel Occlusion	0	0	0 – 0.0259
Pseudoaneurysm	0	0	0 – 0.0259
AV Fistulae	0	0	0 – 0.0259
Major Bleeding	0	0	0 – 0.0259
Vascular Repair	0	0	0 – 0.0259
Death	0	0	0 – 0.0259

A clinical study of 181 patients evaluated safety and efficacy of a restick of the same artery following an initial ANGIO-SEAL device deployment. Patients were included in the study if they had an ANGIO-SEAL device deployment and subsequently underwent arterial access using the same artery that had previously been closed with an ANGIO-SEAL device within 90 days of the original device placement.
