Indications:
The RX and OTW Takeru PTCA Balloon Dilatation Catheter is indicated for balloon dilatation of the stenotic portion in the coronary artery or bypass graft stenosis for the purpose of myocardial perfusion. This product (balloon models 2.0-5.0 mm) is also indicated for the post-delivery expansion of balloon expandable stents.

The RX NC Takeru PTCA Balloon Dilatation Catheter is indicated for balloon dilatation of the stenotic portion in the coronary artery or bypass graft stenosis for the purpose of myocardial perfusion. This product is also indicated for the post-delivery expansion of balloon expandable stents.

RX ONLY. Refer to the product labels and package insert for complete warnings, precautions, potential complications, and instructions for use.

DELIVER PERFORMANCE WHERE IT MATTERS MOST

Reach and cross complex coronary lesions with demonstrated superiority¹
A LOWER PROFILE FOR CROSSABILITY

PTCA balloon dilatation catheters engineered to have the highest performance in reaching and crossing complex lesions²⁻⁴

Choose the RX semi-compliant PTCA balloon catheter with Thin Tip Technology and a lower entry profile than the market-leading 1.2 mm PTCA balloon catheter.¹

TAKERU Φ 1.50 x 6 mm has a lower profile than MINI TREK Φ 1.20 x 6 mm¹

Optimal re-crossability provides the potential to use fewer balloons

Tighter re-wrapping in a semi-compliant and non-compliant balloon compared to leading competitors.¹

Re-wrap after nominal pressure

Semi-compliant Φ 2.5 mm balloons

TAKERU: 2.5
TREK: 2.66
Emerge: 2.422

Non-compliant Φ 3.0 mm balloons

TAKERU: 3.0
TREK: 2.734
Emerge: 3.520

Bench test measured diameter of balloon following re-wrap after nominal inflation compared to leading competitors.¹

PUSHING BOUNDARIES

Terumo Interventional Systems is committed to your success with innovative procedural solutions and ongoing support for your most challenging cases.

We are relentlessly seeking new ways to help you apply effective solutions and achieve better outcomes for more patients.

ORDERING INFORMATION
A LOWER PROFILE FOR CROSSABILITY

PTCA balloon dilatation catheters engineered to have the highest performance in reaching and crossing complex lesions1,4

Choose the RX semi-compliant PTCA balloon catheter with Thin Tip Technology and a lower entry profile than the market-leading 1.2 mm PTCA balloon catheter.1

TAKERU 1.50 x 6 mm has a lower profile than MINI TREK 1.20 x 6 mm1

Optimal re-crossability provides the potential to use fewer balloons

Tighter re-wrapping in a semi-compliant and non-compliant balloon compared to leading competitors.2

Re-wrap after nominal pressure

Semi-compliant 1.5 mm balloons

Non-compliant 1.5 mm balloons

More flexibility with less force at the distal tip vs. the leading semi-compliant PTCA balloon catheters

Superior tracking through tortuous anatomy with a semi-compliant PTCA balloon catheter1

Transmission of force required to flex distal tip

For your complex coronary procedures—harness the quality and innovation of semi-compliant, non-compliant and over-the-wire PTCA balloon dilatation catheters from TERUMO.
