CHOOSE COMPATIBILITY FOR SUPERIOR PERFORMANCE

Combine TERUMO guidewires and catheters for your procedural challenges
WORKING BETTER TOGETHER

Combine TERUMO guidewires and catheters for superior access and lesion crossing\(^1,a\)

**Glidewire**
Hydrophilic Coated Guidewires

Address procedural challenges with a range of optimal wire stiffness profiles

The rigidity of select TERUMO GLIDEWIRE\(^\circledR\) Guidewires was established using a 3-point mechanical bend test protocol. This testing exerted force on guidewire shafts to measure wire stiffness.

**Glidecath**
Hydrophilic Coated Catheter

Enhance selectivity and vessel navigation

- Excellent trackability and torque control\(^1\)
- Multiple access options with 15 available tip shapes

**Navicross**
Support Catheters

Optimize access and complex lesion crossing

- Superior wire support for better wire control with a double-tapered tip\(^1,b\)
- Highest kink resistance and unmatched pushability with a double-braided design\(^1,b\)

GLIDEWIRE\(^\circledR\) offers reliable performance for your challenging access procedures.

\(^1\)When compared to Cook CI and Spectranetics Quick-Cross

\(^a\)When compared to leading competitors
Challenge: Optimize navigation and lesion crossing to reach and traverse a moderately occluding lesion located in the superficial femoral artery.

Solution: Combine GLIDECA TH® Hydrophilic Coated Catheter and GLIDEWIRE® Hydrophilic Coated Guidewire for optimal vessel navigation and best-in-class performance.1,a

Challenge: Reach and traverse softer lesions and mitigate potential damage to healthy tissue in a subtotaled popliteal occlusion with minimal visible calcification.

Solution: Combine GLIDECA TH® Hydrophilic Coated Catheter and GLIDEWIRE® GOLD Hydrophilic Coated Guidewire to mitigate potential vessel damage with best-in-class performance.1,a

When compared to Cook CXI and Spectranetics Quick-Cross

Leverage enhanced trackability for vessel navigation with the combination of GLIDEWIRE® and GLIDECA TH®

Stenosis Severity ~50%

Enable optimal lesion crossing with the combination of GLIDEWIRE® and NAVICROSS®

Stenosis Severity ~90%

Challenge: Reach and traverse a long and heavily calcified lesion in the superficial femoral artery with optimized pushability and kink resistance, while maintaining wire catheter shape.

Solution: Combine NAVICROSS® Support Catheter with GLIDEWIRE® Hydrophilic Coated Guidewire for the best kink resistance, a small crossing profile and unmatched pushability to cross large segments of highly calcified lesions with best-in-class performance.1,a

Challenge: Reach and traverse a heavily calcified lesion in the popliteal artery while preserving the shape of the wire and catheter.

Solution: Combine NAVICROSS® Support Catheter and GLIDEWIRE ADVANTAGE® Guidewire for crossing large segments of highly calcified lesions with best-in-class performance.1,a
Terumo Interventional Systems is committed to your success with innovative procedural solutions and ongoing support for your most challenging cases.

We are relentlessly seeking new ways to help you apply effective solutions and achieve better outcomes for more patients.

Choose the compatible designs of TERUMO guidewires and catheters for your peripheral procedure challenges.
