PUSHING BOUNDARIES

Terumo Interventional Systems is **committed to your success** with innovative procedural solutions and ongoing support for your most challenging cases.

We are relentlessly seeking new ways to help you achieve better outcomes for more patients.

Packed 1 per box

TRANSFORM YOUR RADIAL TECHNIQUE

Stainless steel flat wire braid provides optimal flexibility, strength and torque control

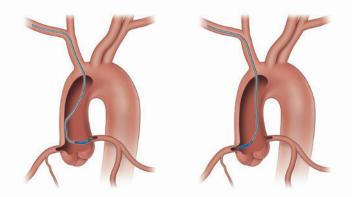

- High radiopacity enhanced by distal braiding to allow for visibility under fluoroscopy
- Coaxial Alignment
 - Tip of catheter is designed to fit coaxial to the ostium
 - Designed to allow catheter to sit at appropriate angle for optimal engagement
 - Soft tip reduces potential for vessel Trauma

Shaft Cross Section

A radial specific catheter that provides enhanced back up support in comparison to standard femoral guide catheter shapes – resulting in simplified procedures¹

- Ikari Left is a universal catheter capable of accessing both the RCA and LCA, this can potentially:
 - Limit catheter exchanges
 - Shorten procedure and fluoroscopy
- Ikari L (IL) has 2.5 times stronger backup force than Judkins L (JL) in TRI.
 - Heartrail Guiding Catheters provide Enhanced Back-Up Support²
 - Stability for advancing device without the catheter backing out of the ostium
- The Ikari Left's enhanced back up and universal nature makes for an optimal solution during STEMI procedures
